

PRODUCT RANGE

Keim Ecosil

Silicate based high quality highly oblitative universal interior paint giving a mineral matt appearance. Available in over 200 standard shades.

Keim Ecosil Grund

Base coat for use on sound previously painted surfaces, dry linings and filled/repared areas where directed.

Keim Dilution

Liquid silicate binder for use as a primer coat on highly absorbent or friable surfaces. Also as a diluent for Ecosil where specified.

Keim fillers and oblitative primers are also available.

Technical data sheets and COSHH data sheets available on request.

CARING FOR THE ENVIRONMENT

Keim Ecosil has been specifically developed in response to the rapidly growing demand for a truly environmentally friendly paint for interior application.

Keim Ecosil interior paint is water based, solvent and VOC free, contains no plasticisers or

biocides and is odourless. It is also non-allergenic, breathable and inherently resistant to mould and algal growth.

It is ideally suited for the decoration of interior walls and ceilings in heavily frequented areas such as public buildings, schools and hospitals. Suitable

substrates include all mineral plasters, concrete, plasterboard and sound previously painted surfaces. It is not suitable for wood or metal.

Keim Ecosil is a longlife finish but is of a comparable price to vinyl silk emulsions. It is the perfect complement to the rest

of the Keim silicate paint range which comprises a water borne potassium silicate binder, inorganic mineral fillers and natural earth oxide colour pigments.
